

Questions for Review of Periodic Table and atoms

What metal has 79 Protons?

I am a gas with 3 energy levels and 22 neutrons, who am I?

How many valence electrons would an atom of tin have?

Which element has 31 electrons?

Which atom has 12 electrons?

I have 3 energy levels and 17 protons. What am I?

What element has an atomic # of 1?

What element in the Noble Gas Family has a total of 4 energy levels?

Helium has an atomic # of 2. How many protons does it have?

What element is an alkali metal with 5 energy levels?

Which element in the Noble Gas Family has 10 electrons?

Which element is a metalloid in group 15 with 4 energy levels?

I am a Noble Gas with only 1 energy level. What am I?

What atom particle has a positive charge?

Which element is a member of the halogen family and has 45 neutrons?

What atom particle has a negative charge?

I have 94 electrons. What am I?

What atom particle has no charge or is neutral?

How many neutrons can be found in an atom of Phosphorus?

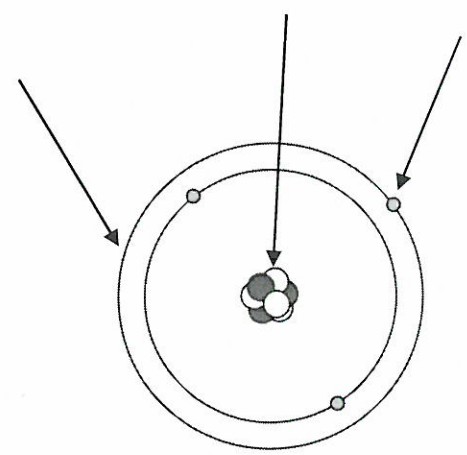

How do I find the number of neutrons an atom has?

The atomic mass is made up of what two atom particles?

The atomic number of an atom tells me what?

The number of protons is equal to the number of what?

Do atoms have an electrical charge?

- A.
- B.
- C.

Draw a Bohr model of the element Oxygen.
Make sure to label protons, neutrons, and electrons
